GRĂDINA BOTANICĂ „ANASTASIE FĂTU” IAȘI

Înființată de medicul și naturalistul Anastasie Fătu, în anul 1856, Grădina Botanică din Iași, prima instituție de acest fel din România, împlinescă 165 ani de existență. Pe actualul amplasament, mutată în anul 1963, Grădina Botanică are o suprafață de 88,7 ha.

Indicii geografici sumari sunt: 47°11' latitudine N, 27°33' longitudine E, altitudine 54 – 150 m, temperatura medie anuală 9,6 °C, precipitații medii anuale 518 mm și vânturi dominante din N – NV. Umiditatea relativă a aerului este de 70%, iar durata de strălucire a soarelui de 46%.

Terenul, sub aspectul tipurilor de sol, a formelor de relief, expoziției, altitudinii etc., este foarte variat, pretându-se amplasării și cultivării unui larg sortiment de plante indigene și exotice.

Grădina a fost concepută și organizată ca instituție reprezentativă pe plan național, cu funcții multiple: didactică, științifică, recreativ-culturală, igienico-sanitară și de conservare a fondului genetic de plante indigene. Grădina cuprinde următoarele secții: Sistematică, Fitogeografică, Complexul de Sere, Flora și Vegetația României, Silvostepa Moldovei, Biologică, Plante Utile, Dendrarium, Ornamentală și Rosarium.

Secția *Sistematică* (4,5 ha) prezintă clasificarea filogenetică a regnului vegetal. În cadrul acestei secții s-au amenajat: un bazin pentru nuferi, câteva stâncării, o turbărie, un auditorium și s-au plantat, până în prezent, peste 700 taxoni.

Secția *Fitogeografică* (12,41 ha) cuprinde plante grupate după locul de origine a acestora, pe continente și ținuturi fitogeografice.

Complexul de Sere, destinat cultivării plantelor tropicale, subtropicale și mediteraneene, cuprinde 20 corpuși de sere cu o suprafață totală de 5.500 mp.

Secția *Flora și Vegetația României* (22 ha) prezintă plante și ecosisteme din țara noastră, grupate pe provincii istorice. În același timp, ținându-se cont de relieful terenului, s-a căutat să se reprezinte zonalitatea și etajarea vegetației, pe latitudine și altitudine.

Secția *Silvostepa Moldovei* (13,92 ha) urmărește conservarea *in situ* și *ex situ* a principalelor tipuri de ecosisteme din silvostepa Moldovei.

Secția *Biologică* (5,5 ha) prezintă diverse aspecte ale organizării plantelor, ale procesului evolutiv și influența omului în direcția acestuia, legăturile dintre plante și mediul de viață, precum și interrelațiile ce se stabilesc între speciile de plante și cele de animale.

Secția *Plante Utile* (1,5 ha) adăpostește reprezentanți ai resurselor vegetale, spontani și cultivati, folosiți de om în diferite scopuri.

Secția *Dendrarium* (17,9 ha) cuprinde plante lemnăsoase indigene și exotice, grupate, pe cât posibil, ecologic, sistematic și în conformitate cu principiile arhitecturii peisajelor.

Secția *Ornamentală* (4 ha) este amplasată la intrarea în Grădina Botanică. Aici se cultivă plante cu valoare decorativă deosebită, multe fiind din flora spontană a României. Sectorul cuprinde unele colecții interesante, precum: crizanteme și dumitrițe, dalii, bujori, stânjenei, lalele, plante rare etc. Tot în această secție a fost organizată și o subsecție pentru nevăzători.

Rosarium sau *Parcul Rozelor* (2 ha), situat în vecinătatea secțiilor *Sistematică* și *Dendrarium*, însumează cca 800 de soiuri de trandafiri, repartizați în grupe horticole după talie,

formă și culoare. În zonele periferice sunt amplasate speciile spontane genitoare, distribuite după originea lor geografică.

Instituția noastră are un *herbar* (cu peste 47.000 colii), o *bibliotecă* (cu 18.650 volume, reviste și extrase științifice), dar și un mic *muzeu botanic*. Grădina Botanică întreține relații de colaborare cu cca 500 instituții similare din toată lumea, pe baza următoarelor publicații: *Index Seminum et Sporarum* (cu apariție anuală), *Journal of Plant Development* (cu apariție anuală) și *Flora Moldaviae et Dobrogeae Exsiccata* (cu apariție periodică).

În cei peste 58 de ani de existență ai Grădinii Botanice pe actualul amplasament, în toate secțiile s-au făcut importante lucrări de organizare și îmbogățire a colecțiilor de plante, ce însumează astăzi peste 10.161 de taxoni, dintre care cca 2.640 se află în sere.

Problematica amenajării definitive a acestui lăcaș de învățământ, știință și cultură constituie o preocupare majoră atât pentru personalul Grădinii, cât și pentru conducerea Universității „Alexandru Ioan Cuza”.

THE BOTANICAL GARDEN “ANASTASIE FĂTU” OF IAȘI

The Botanical Garden of Iași (Iassy) is the first institution of this kind in Romania, founded by the naturalist and physician Anastasie Fătu, in 1856. It follows that the Garden is 165 years old. The Botanical Garden, which was moved to its present site in 1963, covers an area of about 88.7 ha.

Geographical data in brief are: 47°11' N latitude, 27°33' E longitude; 54 – 150 m above sea level; average annual temperature 9.6 °C; average rainfall 518 mm/year, dominant winds N – NW; relative humidity of the air 70%; sunshine duration 46%.

The land, in terms of soil types, geographical features, slopes, altitude etc., is extremely varied and, consequently, well suited to a wide range of both, indigenous and exotic plants cultivation.

The Botanical Garden of Iași was conceived and set up as a significant institution of national interest, fulfilling multiple functions as: teaching place, scientific, cultural-recreational, sanitary institution, as well as for the preservation of the genetic fund of the indigenous plants. It contains 10 sections: Greenhouse Complex, Systematic, Biological, Ornamental, Dendrarium, World Flora, Romanian Flora and Vegetation, Moldavian forest-steppe, Useful Plants, and the Rose Garden.

The *Systematic* Section (4.5 ha) contains the phylogenetic classification of the flora. Up to now, there have been arranged within the framework of this section an ornamental lake for waterlilies, several rock-gardens, a peat bog and an auditorium. So far, over 700 systematic unit plant species have been planted within.

The *World Flora* Section (12.41 ha) contains plants that are grouped according to the continents and phyto-geographical area where they are coming from.

The *Greenhouse Complex*, meant to the growing of tropical, subtropical and mediterranean plant species, consist of 20 buildings, with a total area of 5,500 sq. m.

The Section called *Romanian Flora and Vegetation* (22 ha) presents the vegetation of Romania according to the existing historical provinces. At the same time, taking into account

the features of the land, an attempt was made to imitate the natural setting of the vegetation, in latitudinal zones and altitudinal belts.

The *Moldavian forest-steppe* section (13.92 ha) aims to preserve *in situ* and *ex situ* the main ecosystems existing into the Moldavian historical province.

The *Biological Section* (5.5 ha) is meant to demonstrate various aspects of plant organization, the evolutionary process, as well as man's influence on the evolutionary process, the connection between plants and their environment, and the interrelations among the plant and animal species.

The *Useful Plants Section* (1.5 ha) contains specimens of spontaneous and cultivated vegetal resources used by man for various purposes.

The *Dendrarium Section* (17.9 ha) includes species of indigenous and exotic woody plants, grouped, as much as possible, according to ecological, systematical and landscape criteria.

The *Ornamental Section* (4 ha) is located at the entrance to the Garden. Here are cultivated decorative plants, many of them from the wild flora of Romania. A special attention has been paid to those collections of chrysanthemums, dahlias, peonies, irises, tulips, rare plants, and so on. New horticultural varieties are also exhibited here. In the same section there is a place, especially organized, for the sightless people.

The *Rose Garden* or the *Park of Roses* (2 ha), located on the plateau at the crossing of the *Systematic* and *Dendrarium* sections and of the acces ways, contains more than 800 varieties of roses distributed in horticultural groups according to their height, shape, and colour. In the peripheral zones, the original wild species are located according to their geographical origin.

Our institution has a *herbarium* (with over 47,000 sheets), a *library* (18,650 volumes) and a small *botanical museum*. Our Botanical Garden cooperates with about 500 similar units all over the world, by means of the following publications: *Index Seminum et Sporarum* (a yearly publication), *Journal of Plant Development* (a yearly publication), and *Flora Moldaviae et Dobrogeae Exsiccata* (a periodically publication).

In these over 58 years of the garden development on this site, much has been done for organizing and enriching the plants collections in all of the Botanical Garden's sections. The collections consist now of more than 10,161 systematical units of plants, of which about 2,640 units are found within the Greenhouses Complex.

The problem of the final accomplishment of this institution of teaching, learning, science, and culture constitutes a major preoccupation for the staff of the Garden and for the leading board of the "Alexandru Ioan Cuza" University of Iași.

LE JARDIN BOTANIQUE “ANASTASIE FĂTU” DE IASSY

Créé par le médecin et le naturaliste Anastasie Fătu en 1856, le Jardin Botanique de Iași (Iassy), qui est la première institution de ce genre en Roumanie, se voit actuellement arriver à l'âge de **165** ans. Sur son emplacement actuel, où il fut transféré en 1963, le Jardin Botanique s'étend sur 88,7 ha environ.

Indices géographiques sommaires: latitude N de 47°11', longitude E de 27°33', altitude de 54 – 150 m, température annuelle moyenne de 9,6 °C, précipitations annuelles moyennes 518 mm, vents dominants du N – NO. L'humidité relative de l'air est de 70%, alors que la durée du rayonnement solaire est de 46%.

Le terrain du Jardin est, du point de vue des types de sol, des formes du relief, de l'exposition ou de l'altitude, très varié et se prête merveilleusement à la culture d'un riche assortiment de plants indigènes et exotiques.

Le Jardin a été conçu et organisé comme une institution de niveau national, porteuse de fonction multiples: didactique, scientifique, culturelle, hygiénico-sanitaire, récréative et préservatrice du fond génétique des plantes indigènes. Il comporte dix secteurs: le Complexe des serres, les sections Sistematică, Biologică, Ornamentale, Dendrarium, la Flore du Globe, la Flore et la Végétation de la Roumanie, Sylvosteppe de Moldavie, les Plantes Utiles et la section Roseraie.

La Section *Sistematică* (4,5 ha) présente la classification phylogénétique du règne végétal. On y a mis au point jusqu'ici: un bassin pour les nénuphars, quelques rocallles, des tourbières, un auditorium et on a planté plus de 700 taxons.

La Section de la *Flore du Globe* (12,41 ha) contient des plantes groupées en fonction de leur lieu d'origine, continent et aire phytogéographique.

Le *Complexe des Serres*, destiné à la culture des plantes tropicales, subtropicales et méditerranéennes, comprend 20 corps de serres à la superficie de 5.500 m².

La Section de la *Flore et de la Végétation de la Roumanie* (22 ha) expose les plantes de notre pays en fonction des régions où elles d'originent. Dans le même temps, en tenant compte des formes du relief de notre Jardin, on a cherché à représenter l'étagement vertical de la végétation.

La Section *Sylvosteppe de Moldavie* (13,92 ha) est consacrée à la conservation *in situ* et *ex situ* des principaux types des écosystèmes de la sylvosteppe de Moldavie.

La Section *Biologică* (5,5 ha) montre certains aspects de l'organisation des plantes, du processus évolutif, des liaisons entre les plantes et le milieu environnant, ainsi que l'influence de l'homme sur la direction du processus évolutif.

La Section des *Plantes Utiles* (1,5 ha) abrite des représentants des ressources végétales spontanées et cultivées que l'Homme utilise dans des buts très divers.

La Section *Dendrarium* (17,9 ha) abrite des plantes ligneuses indigènes et exotiques, disposées, dans la mesure possible, selon les critères écologique, systématique et architectural.

La Section *Ornamentale* (4 ha) est située à l'entrée du Jardin. Ici, on cultive des plantes ornementales, des plantes décoratives issues de la flore spontanée, des plantes rares, des dahlias, des pivoines, des iris, des chrysanthèmes, et c'est toujours ici que sont exposées les nouveautés de l'horticulture. Dans le même endroit, il y a aussi une sous-section pour les aveugles.

La Roseraie ou le Parc aux Roses (2 ha), située au croisement des principaux secteurs, au carrefour des allées principales, est riche de presque 800 sortes de roses, réparties en groupes horticoles d'après la taille, la forme et la couleur. A la périphérie, ont été placées les espèces sauvages génitrices, distribuées selon leur origine géographique.

Notre institution possède encore un *herbier* (sur 47.000 feuilles), une *bibliothèque* (18.650 tomes) et un petit *musée*. Le Jardin Botanique entretient des relations avec à peu près 500 institutions similaires du monde entier au moyen des publications suivantes: ***Index Seminum et Sporarum*** (qui paraît tous les ans), ***Journal of Plant Development*** (qui paraît tous les ans) et ***Flora Moldaviae et Dobrogeae Exssiccata*** (qui paraît régulière).

Depuis plus 58 ans que le Jardin existe sur son emplacement actuel, on a effectué d'importants travaux d'organisation et d'enrichissement des collections végétales. Ces collections comprennent plus 10.161 taxons, dont environ 2.640 se trouvent dans les serres.

Le problème de l'aménagement définitif de cette institution d'enseignement, de science et de culture constitue une préoccupation majeure pour le personnel du Jardin et pour la direction de l'Université "Alexandru Ioan Cuza" de Iași (Iassy).

DER JASSYER BOTANISCHE GARTEN "ANASTASIE FÄTU"

Der Botanische Garten aus Iași (Iassy) die erste Einrichtung dieser Art in Rumäniens, die im Jahre 1856, von dem Arzt und Naturwissenschaftler Anastasie Fătu gegründet wurde, wird jetzt **165** Jahre alt. Der botanische Garten, der auf den heutigen Grund, im Jahre 1963 versetzt wurde, hat eine Fläche von 88.7 ha.

Die wichtigsten geographischen Kennzeichnen sind: 47°11' nördliche Breite, 27°33' östliche Länge, 54 – 150 m ü.M., 9,6 °C durchschnittliche jährliche Temperatur, 518 mm durchschnittliche atmosphärische Niederschläge und vorherrschende Winde aus dem N-NW. Die relative Feuchtigkeit der Luft beträgt 70% und die Dauer des Sonnenscheins 46%.

Was die Erdtypen, die Reliefformen, die Höhe sowie die Ausstellungsmöglichkeiten usw. anbelangt ist das Gelände sehr verschieden, so dass es sich gut für den Anbau einer sehr reichen Auswahl von einheimischen und exotischen Pflanzen eignet.

Der botanische Garten war als eine Einrichtung gedacht die mehrere Funktionen wie: didaktische, wissenschaftliche, kulturelle, hygienische Funktion hat und gleichzeitig auch als Bewahrer der genetischen Vorrat von einheimischen Pflanzen dient. Der Garten beträgt 10 Teile: die Treibhäuser und folgende Sektoren: der taxonomische, biologische, ornamentale und dendrologische Sektor, die Flora der Erde, die Flora und Vegetation Rumäniens, nützliche Pflanzen, der Rosengarten und die Moldauischen Waldsteppe Sektor.

Die *Treibhäuser* mit tropischen, subtropischen und Mittelmeergebiet Pflanzen bestehen aus 20 Gebäuden mit einer gesamten Fläche von 5.500 m².

Der *Systematische* Sektion (4,5 ha) stellt die phylogenetische Einteilung der Pflanzenwelt dar. Hier gibt es ein Becken mit Seerosen, einige Steingärten, Torfmoore, einen Hörsaal und bis jetzt wurden mehr als 700 systematischen Pflanzeneinheiten gepflanzt.

Der *Biologische* Sektion (5,5 ha) hat einige Stellen der Anlage, den evolutionären Prozess, und der menschliche Einfluss bei der Leitung ihrer Zusammenhänge zwischen der Anlage und die Verbindungen zwischen ihnen und der Umwelt gegründet.

Der *Dendrarium* (17,9 ha) einheimische und exotische Gehölze gruppiert, soweit möglich, umweltfreundlich, systematisch und in Übereinstimmung mit den Grundsätzen der Landschaftsarchitektur

Der *Ornamental* Sektion (4 ha) befindet sich am Eingang zum Garten. Hier ist Zierpflanzen, viele spontane Rumänen, in Sammlungen, wie seltene Pflanzen, Dahlien, Pfingstrosen, die Iris, Tulpen, Chrysanthemen, usw. gruppiert angebaut. Auch in diesem Abschnitt ist für die blinden Menschen organisiert

Der Sektion *Flora der Erde* (12,41 ha) enthält Pflanzen die nach der Herkunft, Kontinenten und phytogeographischen Gegende eingeteilt wurden.

Der Sektion *Flora und Vegetation Rumäniens* (22 ha) stellt die Flora Rumäniens dar, die nach den historischen Gebieten des Landes angeordnet wurden, wobei man die verschiedensten Bodenformen beachtete.

Der Sektion zur *Moldauischen Waldsteppe* (13,92 ha) enthält der wichtigsten waldsteppe Ökosystemen in situ und ex situ konserwiren.

Der Sektion für *nützliche Pflanzen* (1,5 ha) beherbergt die Vertreter der spontanen sowie die vom Menschen zu verschiedenen Zwecken angebauten Pflanzen.

Der *Rosengarten* (2 ha) der sich an der Kreuzung der Hauptsektoren und Wege befindet, enthält mehr als 800 Sorten von Rosen, die in gartenbewohnenden Gruppen nach Wuchs, Form und Farbe eingeteilt wurden. In den Grenzteile kann man wildwachsende Pflanzenarten antreffen, die nach ihrer geographischen Herkunft angeordnet wurden.

Unsere Institution hat auch ein *Herbarium* (47.000 Seiten), eine *Bibliothek* (18.650 Bänder) und ein kleines *Museum*.

Der botanische Garten unterhält Beziehungen, die sich auf gegenseitige Zusammenarbeit stützen, mit 500 Institutionen aus der ganzen Welt, mit Hilfe von den folgenden Publikationen: *Index Seminum et Sporarum* (jährliche Veröffentlichung), *Journal of Plant Development* (jährliche Veröffentlichung), und *Flora Moldaviae et Dobrogeae Exsiccata* (das Auftreten von unregelmäßigen).

Während des 58 jährigen Bestehens des Gartens auf dem heutigen Ort wurden in allen Sektoren wichtige Anordnungs- und Bereicherungsarbeiten der Pflanzensammlungen gemacht.

Die Sammlungen umfassen mehr als 10.161 taxonomische Einheiten, von denen sich ungefähr 2.640 in Glashäuser befinden.

Problem des Finale der Ort der Bildung, Wissenschaft und Kultur ist ein wichtiges Anliegen im Garden Personal und das Management von der “Alexandru Ioan Cuza” Universität aus Iasi.

Grădina Botanică „Anastasie Fătu” din Iași a aderat la IPEN, *Rețeaua Internațională de Schimb de Plante*, în anul 2009. În acest context, materialul propus pentru schimb în *Index Seminum et Sporarum* respectă codul de conduită impus de IPEN.

Codul IPEN, asociat fiecărui taxon din acest catalog, are forma generală: XX-0-IAGB-11112W, unde:

- primele două litere corespund codului țării de origine a speciei date (XX indică faptul că originea taxonului este necunoscută);
- cifra următoare indică prezența (1) sau absența (0) unor restricții de transfer;
- literele următoare precizează codul grădinii noastre botanice (în conformitate cu BGCI);
- următoarele cifre împreună cu ultima literă constituie codul intern de acces al speciei:
 - primele patru cifre indică anul de înregistrare a speciei (XXXX indică an de origine necunoscut);
 - următoarea cifră reprezintă codul de localizare în grădină (numerotarea secțiilor Grădinii Botanice este redată mai jos);
- litera indică originea speciei date: W = plantă spontană; Z = plantă spontană adusă în cultură; G = plantă cultivată.

Secțiile Grădinii Botanice și coordonatorii acestora:

1. Secția Biologică – biolog dr. Lidia ADUMITRESEI
2. Secția Dendrologică – biolog dr. Ciprian BÎRSAN
3. Secția Complexul de Sere – biolog dr. Camelia IFRIM
4. Secția Ornamentală – ing. Mihaela POPA
5. Secția Ornamentală – colecția de crizanteme – biolog dr. Ana COJOCARIU
6. Secția Flora și Vegetația României – biolog dr. Constantin MARDARI
7. Secția Rosarium – ing. Mihaela MIHALACHE
8. Secția Sistematică – biolog dr. Adrian OPREA
9. Secția Plante Utile – biolog dr. Cristiana Virginia PETRE
10. Secția Fitogeografică – ing. Iuliana GAȚU
11. Secția Silvostepa Moldovei – biolog dr. Constantin MARDARI

“Anastasie Fătu” Botanical Garden of Iași had been registered as a member of IPEN, the *International Plant Exchange Network*. In this context, the material proposed for exchange in the *Index Seminum et Sporarum* intends to comply with the specific code of conduct required by IPEN.

The specific IPEN number associated to each taxon proposed for exchange, has the following structure: XX-0-IAGB-11112W

- the first two positions reffer to the country of origin of the taxon (XX indicates an unknown origin of the taxa);
- the next position indicates restrictions of transfer (1-restriction, 0-no restriction);
- the next letters indicate our garden code (according to BGCI);
- the next five digits, together with the last letter, indicate the internal identification number:
 - the first four digits represent the registration year of the species (XXXX indicates an unknown registration year);
 - the next position shows the place of the species in the botanic garden sections (the within numbered sections in the botanic garden are given below);
- the last letter indicated the origin of the species, as follows: W = wild plant; Z = wild plant in culture; G = a cultivated plant species.

The Sections of the Botanical Garden, along with their leaders:

1. Biological Section – PhD biologist Lidia ADUMITRESEI
2. Dendrological Section – PhD biologist Ciprian BÎRSAN
3. Greenhouses Complex – PhD biologist Camelia IFRIM
4. Ornamental Section – engineer Mihaela POPA
5. Ornamental Section – *Chrysanthemum* collection – PhD biologist Ana COJOCARIU
6. Romanian Flora and Vegetation Section – PhD biologist Constantin MARDARI
7. Rose Garden – engineer Mihaela MIHALACHE
8. Systematical Section – PhD biologist Adrian OPREA
9. Useful Plants Section – PhD biologist Cristiana Virginia PETRE
10. Phytogeographic Section – engineer Iuliana GAȚU
11. The Moldavia Sylvosteppe Section – PhD biologist Constantin MARDARI

PLANT MATERIALS SUPPLY AGREEMENT

In response to the International Convention on Biological Diversity (Rio de Janeiro, 1992), the **Botanical Garden “Anastasie Fătu” of University “Alexandru Ioan Cuza” Iași** supplies the seeds requested on the following conditions:

1. The seeds are used for the common good in the areas of research, conservation, education and the development of botanical gardens;
2. If the recipient seeks to commercialise either the genetic material, its products or research derived from it, then written permission must be obtained from *The Director* of the Botanical Garden of Iași;
3. The genetic material, its products or resources derived from it should not be passed onto a third party without written permission from *The Director* of the Botanical Garden of Iași;
4. The research publications resulting from the use of the genetic material should acknowledge the Botanical Garden of Iași as the supplier.

I agree with the conditions of supply of seeds.
